

DOM Practice Assignment (Easy to Medium)

Instructions: Create a simple webpage using HTML, CSS, and JavaScript. Complete the following tasks using JavaScript DOM manipulation. All interactions should happen dynamically without refreshing the page.

1. Change the text of an from "Welcome" to "Welcome to DOM Manipulation" using JavaScript.
2. Create a button. When the button is clicked, change its text to "Clicked Successfully".
3. Create a button "Toggle Theme". On each click, toggle between light mode and dark mode (change background and text color).
4. Create a section (div) with some text. Add a button that toggles between Show and Hide for that section.
5. Create a counter starting from 0. Add two buttons: Increase and Decrease (value should not go below 0).
6. Create an input box and a button. When the button is clicked, display the entered text inside a paragraph below.
7. After displaying the input text, clear the input field automatically.
8. Create an input field and a button "Add Item". Each click should add the input value as a new inside a .
9. Add a button "Remove Last Item" that removes the last list item from the list.
10. Create 3 cards (divs). When a card is clicked, add an active class to the clicked card and remove the active class from the other cards.
11. Display an image. On button click, change the image source to another image.
12. Create a textarea. Show a live character count below it as the user types.
13. Create a button "Submit". Once clicked, disable the button and change its text to "Submitted".
14. Create a form with a Name input. On submit, if the name is empty show an error message, else show "Form submitted successfully".
15. Create a button "Add Box". On each click, add a new colored box (div) to the page.
16. Each dynamically created box should have a Delete button. Clicking delete should remove only that box.
17. When the mouse enters a box, change its background color. When the mouse leaves, revert the color.
18. Create a list of names and a search input box. As the user types, filter the list items that match the search text.
19. Create a password input and a Show/Hide button. Toggle between type='password' and type='text'.
20. Build a mini todo list with input field and add button. Each todo should have mark as done and delete options.
