

String in JS Assignment

Q1. String Creation

Create a string using:

1. Double quotes
2. Single quotes
3. Backticks

Print all three strings.

Q2. String Length

Create a string "JavaScript" and print its **length** using the `.length` property.

Q3. String Indexing

Given the string:

```
let str = "Hello";
```

Print:

- First character
 - Last character
-

Q4. Convert to Uppercase

Create a string "frontend developer" and convert it to **uppercase**.

Q5. Convert to Lowercase

Create a string "JAVASCRIPT" and convert it to **lowercase**.

Q6. Trim Whitespace

Given the string:

```
let text = "  Learn JavaScript  ";
```

Remove extra spaces using the `trim()` method.

Q7. Slice a String

Given the string:

```
let msg = "JavaScript Programming";
```

Use `slice()` to extract "JavaScript".

Q8. Concatenate Strings

Create two strings:

```
let firstName = "Karan";  
let lastName = "Singh";
```

Join them using `concat()` and print the full name.

Q9. Replace a Word

Given the string:

```
let sentence = "I like JavaScript";
```

Replace "JavaScript" with "JS".

Q10. Character at Index

Given the string:

```
let str = "Developer";
```

Print the character at index 4 using `charAt()`.

Q11. Template Literals

Create variables:

```
let product = "Laptop";  
let price = 50000;
```

Use **template literals** to print:

```
The price of Laptop is 50000
```

Q12. Multiline String

Create a **multiline string** using **template literals** and print it.
