

Assignment of Array (Javascript)

Q1. Create an Array

Create an array containing **five numbers** and print it to the console.

Q2. Length and Last Element

Given the array:

```
let arr = [3, 6, 9, 12, 15];
```

1. Print the length of the array
 2. Print the **last element** using the `length` property
-

Q3. Update Array Values (Mutability)

Given:

```
let marks = [45, 55, 65, 75];
```

Replace 55 with 60 and print the updated array.

Q4. Push and Pop Operations

Given:

```
let fruits = ["Apple", "Banana"];
```

1. Add "Mango" to the array
 2. Remove the last element
 3. Print the final array
-

Q5. Shift and Unshift Operations

Given:

```
let cities = ["Delhi", "Mumbai", "Pune"];
```

1. Add "Chandigarh" at the beginning
 2. Remove the first element
 3. Print the final array
-

Q6. Find the Sum Using a Loop

Given:

```
let numbers = [10, 20, 30, 40];
```

Use a `for` loop to calculate and print the **sum** of all elements.

Q7. Print Even Numbers

Given:

```
let nums = [1, 2, 3, 4, 5, 6];
```

Use a `for...of` loop to print **only the even numbers**.

Q8. Check Element Presence

Given:

```
let languages = ["C", "C++", "Java", "JavaScript"];
```

1. Check if "Java" exists in the array
 2. Print the index of "JavaScript"
-

Q9. Count Elements Without Using `length`

Given:

```
let items = ["Pen", "Pencil", "Eraser", "Scale"];
```

Use a loop to count the number of elements **without using the `length` property**.

Q10. Remove a Specific Element

Given:

```
let arr = [5, 10, 15, 20];
```

Remove 15 from the array **without using pop() or shift()**.
